To: [redacted]

new relic

Hello,

Weekly observability report of [redacted]

Generated 2026-11-10 00:12 UTC. Overall: RED

1. Health summary

Area	Status	This week	Week over week	Source
Alert events	RED	120 critical open now, 10 warning open now	critical opened 4606 (prev 4261), warning opened 655 (prev 1955)	[1], [2], [3], [4]
Browser	AMBER	1 of 1 apps above an amber threshold (p75) Buying Program Simulator: LCP 2.09 s, INP 72 ms, CLS 0.005, JS errors 6.06% of page views	apps above amber: 1 (prev 1)	[11], [12], [15]
Mobile	NO DATA	6 mobile app(s) exist but sent no MobileSession events in the Report Window.	no data	[13], [14], [15]
APM services	RED	8 of 22 services above 1% errors Top errors: netdemo-front-apm 14.57% (134109 requests) Top p95: netdemo-back-apm 2508 ms	services above 1% errors: 8 (prev 0)	[6]
Hosts	RED	6 of 10 hosts peaked above 85% network-device: cpu 100%, memory 75%, disk 26% netdemo-app2: cpu 100%, memory 81%, disk 27%	hosts above 85%: 6 (prev 0)	[7]
Synthetics	RED	overall failure 26.27% across 78 monitors test-ping-reddit-com-terms: 100.00% failed (672 checks) Microsoft health: 100.00% failed (336 checks)	overall failure 26.27% (prev 26.75%)	[8], [9]

Service levels	RED	8+ of 56 below 25% error budget Online Boutique Frontend - Success: 0% error budget left CC - Latency < 0.1s (Store-Checkout): 0% error budget left	no week-over-week comparison (latest snapshot only)	[10]

2. Critical alert events

120 critical alert event(s) open now; 4606 opened this week; 10 warning open now. [1], [3]
Open since 2026-11-07 01:45 UTC (2.9 days): CC - Latency < 0.1s (Store-Checkout), CC - Latency < 0.1s (Store-Checkout) query result is < 10.0 for 20 minutes on...
Open since 2026-11-07 14:24 UTC (2.4 days): test-ping-mozilla-org-terms, test-ping-mozilla-org-terms query result is > 0.0 on 'Synthetics - Failed Check'
Open since 2026-11-07 14:27 UTC (2.4 days): test-ping-wikipedia-org-contact, test-ping-wikipedia-org-contact query result is > 0.0 on 'Synthetics - Failed...
Open since 2026-11-07 14:28 UTC (2.4 days): test-ping-wikipedia-org-privacy, test-ping-wikipedia-org-privacy query result is > 0.0 on 'Synthetics - Failed...
Open since 2026-11-07 14:32 UTC (2.4 days): test-ping-docker-com-about, test-ping-docker-com-about query result is > 0.0 on 'Synthetics - Failed Check'
(115 more open critical alert events not listed. [4])
Alert events that opened before the 7-day window and are still open are not counted.

3. Probable causes and recommended actions (Autopilot)

Weekly Observability Report

Alert Events: CC - Latency < 0.1s (Store-Checkout), test-ping-mozilla-org-terms, test-ping-wikipedia-org-contact

Report Window: 2026-11-03 00:12 UTC – 2026-11-10 00:12 UTC (7 days) · Account

The three alert events were investigated. **Alert event 1** (CC - Latency SLI for store-checkoutservice): no incidents fired during the window — SLI attainment was 99.99% with only 2 of 25,932 requests exceeding the 100 ms threshold. **Alert event 2** (test-ping-mozilla-org-terms): 100% failure rate — all 672 checks failed from Washington, DC, USA. **Alert event 3** (test-ping-wikipedia-org-contact): 100% failure rate — all 672 checks failed from Washington, DC, USA, every failure returning `HTTPError: Server replied with a HTTP 404 response code`.

PROBABLE CAUSES

Alert event 1 — CC - Latency < 0.1s (Store-Checkout): No SLI breach detected. SLI attainment over 7 days was 99.99% (25,930 good / 2 bad out of 25,932 total requests). The 2 slow requests (>100 ms) occurred on a single day. 7-day average duration was 0.097 ms (p99: 0.465 ms, max: 137.3 ms). No incidents were recorded against the 10 CC - Latency service level entities during the window (0 `NrAiIncident` events). A ~2.3-day gap in transaction throughput was observed (days 5–6 of the window showed 0 transactions), but this did not trigger an SLI violation because no bad requests occurred. No application logs were found during the gap window (2026-11-07 01:00–02:30 UTC). The alert event that prompted this investigation could not be matched to any incident record in the report window.

Alert event 2 — test-ping-mozilla-org-terms: 672 of 672 checks failed (100% failure rate) across the entire 7-day window, all from a single location (Washington, DC, USA). Failures were evenly distributed at 96 per day. The error type could not be retrieved via NRQL facet query (execution error), so the specific failure reason is **data missing** for this monitor. The sustained 100% failure rate from a single location suggests the monitored endpoint is unreachable or the monitor configuration (URL, assertions) is invalid.

Alert event 3 — test-ping-wikipedia-org-contact: 672 of 672 checks failed (100% failure rate) across the entire 7-day window, all from Washington, DC, USA. Every failure returned `HTTPError: Server`

`replied with a HTTP 404 response code`. The monitored URL is returning a 404 Not Found, indicating the target page has been moved, removed, or the monitor URL is misconfigured.

RECOMMENDED ACTIONS

- **Alert event 1 (CC - Latency SLI):** Investigate the ~2.3-day transaction throughput gap (days 5–6) on store-checkoutservice — 0 transactions were recorded. Verify whether the service was intentionally scaled down or experienced a deployment issue. The SLI itself is healthy and no action is needed on the latency threshold.
- **Alert event 2 (test-ping-mozilla-org-terms):** Validate the monitor URL and expected assertions. The monitor has been failing 100% for at least 7 days from its only configured location. Either update the URL to a valid endpoint or disable the monitor to reduce alert noise.
- **Alert event 3 (test-ping-wikipedia-org-contact):** The target page returns HTTP 404. Update the monitor URL to a valid Wikipedia page (the `/contact` path no longer resolves) or remove the monitor if it is no longer needed.
- **General:** Both synthetic monitors run from only one location (Washington, DC, USA). Consider adding additional locations to distinguish between endpoint failures and location-specific network issues.

4. Data gaps

Mobile: 6 mobile app(s) exist but sent no MobileSession events in the Report Window.
