[RED] Weekly observability report, account [redacted], 2026-11-09

New Relic Workflow Automation <noreply@eu-notifications.newrelic.com> Mon, Nov 9, 2026 at 6:08 PM
To: [redacted]

new relic

Hello,

[redacted]vability report of [redacted]

Generated 2026-11-09 18:05 UTC. Overall: RED

1. Health summary

Area	Status	This week	Week over week	Source
Alert events	RED	106 critical open now, 10 warning open now	critical opened 4603 (prev 4295), warning opened 647 (prev 2018)	[1], [2], [3], [4]
Browser	AMBER	1 of 1 apps above an amber threshold (p75) Buying Program Simulator: LCP 2.09 s, INP 72 ms, CLS 0.005, JS errors 6.06% of page views	apps above amber: 1 (prev 1)	[11], [12], [15]
Mobile	NO DATA	6 mobile app(s) exist but sent no MobileSession events in the Report Window.	no data	[13], [14], [15]
APM services	RED	8 of 22 services above 1% errors Top errors: netdemo-front-apm 14.57% (134109 requests) Top p95: netdemo-back-apm 2508 ms	services above 1% errors: 8 (prev 0)	[6]
Hosts	RED	6 of 10 hosts peaked above 85% network-device: cpu 100%, memory 75%, disk 26% netdemo-app2: cpu 100%, memory 81%, disk 27%	hosts above 85%: 6 (prev 0)	[7]
Synthetics	RED	overall failure 26.27% across 78 monitors test-ping-reddit-com-terms: 100.00% failed (671 checks) Microsoft health: 100.00% failed (336 checks)	overall failure 26.27% (prev 26.79%)	[8], [9]

Service levels	RED	8+ of 56 below 25% error budget Online Boutique Frontend - Success: 0% error budget left CC - Latency < 0.1s (Store-Checkout): 0% error budget left	no week-over-week comparison (latest snapshot only)	[10]

2. Critical alert events

106 critical alert event(s) open now; 4603 opened this week; 10 warning open now. [1], [3]
Open since 2026-11-02 20:52 UTC (6.9 days): again-dummy, again-dummy query result is >= 1.0 on 'WBA Workflowautomation Test'
Open since 2026-11-06 22:02 UTC (2.8 days): Outdated TDV Checker, Outdated TDV Checker query result is > 0.0 on 'Synthetics - Failed Check'
Open since 2026-11-07 01:45 UTC (2.7 days): CC - Latency < 0.1s (Store-Checkout), CC - Latency < 0.1s (Store-Checkout) query result is < 10.0 for 20 minutes on 'CC - Latency (Error budget consumption) -
Open since 2026-11-07 14:24 UTC (2.2 days): test-ping-mozilla-org-terms, test-ping-mozilla-org-terms query result is > 0.0 on 'Synthetics - Failed Check'
Open since 2026-11-07 14:27 UTC (2.2 days): test-ping-wikipedia-org-contact, test-ping-wikipedia-org-contact query result is > 0.0 on 'Synthetics - Failed Check'
(101 more open critical alert events not listed. [4])
Alert events that opened before the 7-day window and are still open are not counted.

3. Probable causes and recommended actions (Autopilot)

Weekly Observability Report

Alert Events 1–3 · Account ( )

Analysis Window: 2026-11-02 18:05 UTC – 2026-11-09 18:05 UTC (7 days)

Investigation of the three critical alert events yielded **partial results**. Alert event details could not be retrieved from NRDB for any of the three events (alert_event_1, alert_event_2, alert_event_3) — no matching alert records were found within the 7-day window. Diagnostic subagents for Outdated TDV Checker, store-checkoutservice SLI/error-budget, and alert condition details returned no structured data. The only NRQL-backed evidence collected pertains to the **again-dummy** synthetic monitor.

PROBABLE CAUSES

Alert Event 1 — again-dummy (Synthetic Monitor)

- **100% failure rate**: 672 total checks, 672 failed, 0 succeeded over the 7-day window.
- All checks ran from a **single location** (London, England, UK) — 672 checks, all failed.
- Monitor type is **Step Monitor** (Chrome browser), running every 15 minutes.
- Probable cause: the target endpoint is unreachable or the step script is broken. With zero successes across 672 checks, this is a **sustained outage or misconfiguration**, not a transient issue.

Alert Event 2 — Outdated TDV Checker (Synthetic Monitor)

- **Data missing.** The application performance analysis subagent returned no structured response for this monitor.
- Monitor is a Scripted API type running every 30 minutes from Frankfurt, DE. Entity is reporting, but no NRQL-backed failure data was collected in this run.
- Probable cause: **unknown — insufficient data.**

Alert Event 3 — CC - Latency < 0.1s (Store-Checkout) (Service Level)

- **Data missing.** The application performance analysis subagent returned no structured response for the store-checkoutservice SLI/error-budget investigation.

- Multiple SLI entities exist for this service level across several policies (Treasury-API-Walmart, Crypto-Custody, Shipping, Treasury-API-Samsung, Treasury-API-Amazon, Treasury-API-Nike, Risk-Analysis, Currency-Exchange, Cart). Alert data shows **4 incidents across 2 issues** per policy and **46–50 Service Levels default alert condition incidents** per policy.
- Probable cause: **unknown — insufficient data.** The volume of Service Levels default alert incidents (46–50 per policy) suggests the SLI is chronically breaching its error budget, likely due to latency on `store-checkoutservice` exceeding the 0.1s threshold.

RECOMMENDED ACTIONS

- **again-dummy:** Review the [again-dummy monitor](https://one.eu.newrelic.com/redirect/entity/) step script and target URL — 100% failure over 7 days indicates the endpoint is down or the monitor is misconfigured. If the target is intentionally decommissioned, disable or delete the monitor to eliminate alert noise and wasted CCU (~112 CCU/month from earlier sessions, not re-checked).
- **Outdated TDV Checker:** Manually inspect the [Outdated TDV Checker monitor](https://one.eu.newrelic.com/redirect/entity/) results in the Synthetics UI to determine failure details — automated analysis returned no data this run.
- **CC - Latency (Store-Checkout):** Investigate `store-checkoutservice` response times to determine why latency exceeds the 0.1s SLI target. Review the APM entity for latency trends and identify slow transactions or downstream dependencies.
- **Alert noise:** The Service Levels default alert condition generated 46–50 incidents per policy with 0 issues resolved — consider tuning the condition threshold or adding a minimum duration clause to reduce noise.
- **Re-run investigation:** Alert event IDs (alert_event_1, alert_event_2, alert_event_3) returned no NRDB records. Verify the correct issue IDs and account ID, or widen the time window if these events opened before the 7-day report period.

4. Data gaps

Mobile: 6 mobile app(s) exist but sent no MobileSession events in the Report Window.
